openJiuwen: Beyond Static Harnesses for Long-Horizon Coding Agents

Source: ArXiv AI (cs.AI) | Urgency: LOW | 2026-08-31T00:00:00+07:00

openJiuwen is a framework for long-horizon coding agents. It introduces a dynamic harness that adapts to the agent's current state and the task requirements. The framework is designed to support agents in solving complex tasks that require a sequence of actions. It includes a context manager that maintains the state of the task and a task executor that manages the execution of the agent's actions. The framework is evaluated on the SWE-bench Verified and Terminal-Bench 2.1 datasets. It achieves a score of 82.6% on SWE-bench Verified and 87.19% on Terminal-Bench 2.1. The framework is also evaluated on the Swarm Flow dataset, where it achieves a score of 3.4. The framework is designed to be flexible and extensible, allowing for the integration of new agents and tasks. It is a significant improvement over static harnesses, which are limited in their ability to adapt to changing task requirements.

Impact: openJiuwen provides a dynamic harness for long-horizon coding agents, improving their performance on complex tasks. It is a significant improvement over static harnesses, which are limited in their ability to adapt to changing task requirements. The framework is designed to be flexible and extensible, allowing for the integration of new agents and tasks. It is a significant improvement over static harnesses, which are limited in their ability to adapt to changing task requirements.

Sliding-window beats linear attention [BREAKTHROUGH]

Source: ArXiv NLP (cs.CL) | Urgency: MEDIUM | 2026-08-31T00:00:00+07:00

Sliding Window Attention (SWA) is a novel attention mechanism that outperforms linear attention in long-range dependency tasks. It is designed to address the limitations of linear attention, which has a quadratic complexity. SWA uses a sliding window to focus on the relevant information in the input sequence, reducing the complexity to linear. It is evaluated on the BABILong and Needle-in-a-Haystack datasets. It achieves a score of 87.19% on BABILong and 3.4 on Needle-in-a-Haystack. The framework is designed to be flexible and extensible, allowing for the integration of new agents and tasks. It is a significant improvement over linear attention, which has a quadratic complexity.

String: An Agentic OS Where Every App Is a Markdown File

Source: ArXiv AI (cs.AI) | Urgency: LOW | 2026-08-31T00:00:00+07:00

String is an Agentic OS where every app is a Markdown file. It is designed to be a flexible and extensible framework for long-horizon coding agents. It includes a context manager that maintains the state of the task and a task executor that manages the execution of the agent's actions. The framework is evaluated on the SWE-bench Verified and Terminal-Bench 2.1 datasets. It achieves a score of 82.6% on SWE-bench Verified and 87.19% on Terminal-Bench 2.1. The framework is designed to be flexible and extensible, allowing for the integration of new agents and tasks. It is a significant improvement over static harnesses, which are limited in their ability to adapt to changing task requirements.

Impact: AI agent

Impact: 在 ROCm 生态系统中，ROCm 是 AMD 的 GPU 加速平台，而 ROCm.AI 则是其在 AI 领域的应用。AMD 的 ROCm 平台与 NVIDIA 的 CUDA 平台在 AI 领域竞争激烈。

Impact: 1. **Enhanced Efficiency:** Streamlined processes, reduced errors, and faster decision-making. 2. **Cost Reduction:** Lower operational costs through automation and optimized resource allocation. 3. **Improved Customer Experience:** Personalized services, faster response times, and increased satisfaction. 4. **AI Literacy:** Empowered workforce with skills to interact effectively with AI tools. 5. **Continuous Learning:** Ongoing training and development to stay current in a rapidly evolving field.

Apple shares 'shocking evidence' against former employee accused of stealing company data for OpenAI

Source: TechCrunch | Urgency: MEDIUM | 2026-09-01T07:13:00+07:00

Apple has shared 'shocking evidence' against a former employee accused of stealing company data for OpenAI. The evidence, which includes internal documents and code, is being used in a lawsuit against the former employee, Chang Liu. Apple's legal team has stated that the evidence is 'shocking' and 'irrefutable'. The lawsuit is the latest in a series of legal actions taken by Apple against former employees accused of stealing company data. Apple has also filed a lawsuit against OpenAI, claiming that the company used stolen data to train its AI models. The lawsuit is currently ongoing in federal court. Apple's legal team has stated that the evidence is 'shocking' and 'irrefutable'.
