[MEDIUM] GxP-Agent: Multi-Agent DAG

Multi-Agent DAG (Directed Acyclic Graph) เป็นโครงสร้างพื้นฐานที่สำคัญสำหรับการจัดการ workflow ในระบบอัตโนมัติ

multi-agent DAG สามารถจัดการ workflow ที่ซับซ้อนได้ โดยแต่ละ agent จะทำหน้าที่เฉพาะทาง และทำงานร่วมกันตามลำดับที่กำหนดไว้

[HIGH] Aegis: AI Agent Runtime

Aegis เป็น runtime สำหรับ AI Agent ที่สามารถจัดการ lifecycle ของ agent ได้

AI agent runtime สามารถจัดการ lifecycle ของ agent ได้ ตั้งแต่การเริ่มต้น การทำงาน และการปิดตัวลง

[HIGH] OpenAI ChatGPT 'Reasoning Model' เปิดตัว 18 ข้อ

OpenAI เปิดตัว Reasoning Model ใหม่ที่มีประสิทธิภาพสูง

ChatGPT Reasoning Model ใหม่สามารถจัดการ task ที่ซับซ้อนได้ เช่น การแก้ปัญหาทางคณิตศาสตร์ และการวิเคราะห์ข้อมูล

[HIGH] OpenAI ChatGPT 'Reasoning Model' เปิดตัว 18 ข้อ

OpenAI เปิดตัว Reasoning Model ใหม่ที่มีประสิทธิภาพสูง และสามารถจัดการ task ที่ซับซ้อนได้

[MEDIUM] OpenAI ChatGPT 'Reasoning Model' เปิดตัว 18 ข้อ

OpenAI เปิดตัว Reasoning Model ใหม่ที่มีประสิทธิภาพสูง

AI agent สามารถจัดการ workflow ที่ซับซ้อนได้ โดยแต่ละ agent จะทำหน้าที่เฉพาะทาง และทำงานร่วมกันตามลำดับที่กำหนดไว้

[MEDIUM] OpenAI ChatGPT 'Reasoning Model' เปิดตัว 18 ข้อ

OpenAI เปิดตัว Reasoning Model ใหม่ที่มีประสิทธิภาพสูง และสามารถจัดการ task ที่ซับซ้อนได้

TokEval: A Tokenizer Evaluation Suite

Source: ArXiv cs.CL | Urgency: LOW | 2026-08-18T17:52:52Z

Tokenizer 是语言模型中用于将输入文本转换为 token 序列的组件。它决定了模型如何理解输入文本的结构和语义。选择合适的 tokenizer 对于模型的性能至关重要。

在评估 tokenizer 时，我们通常会关注以下几个指标：

- TokEval**：衡量 tokenizer 的 **fertility**（即每个 token 平均生成的 token 数量）。
- UTF-8**：衡量 tokenizer 在处理 UTF-8 编码文本时的效率。
- bits-per-byte**：衡量 tokenizer 的压缩率，即每个字节需要多少 bit 来表示。
- pretokenization**：衡量 tokenizer 在预处理阶段的表现。
- perplexity**：衡量 tokenizer 在生成 token 时的困惑度。
- Spearman**：衡量 tokenizer 在生成 token 时的相关性。

在本文中，我们将介绍一种新的 tokenizer，并展示它在上述指标上的表现。我们将使用 **0.80** 作为基准值，并比较不同 tokenizer 的性能。

我们的新 tokenizer 在 TokEval 和 fertility 指标上表现优异，同时保持了较低的 bits-per-byte 和 perplexity。此外，它在 Spearman 指标上也取得了 0.80 的高分，表明它在生成 token 时具有高度的相关性。

我们还将展示该 tokenizer 在 UTF-8 编码文本上的表现，以及它在 pretokenization 阶段的性能。最后，我们将讨论该 tokenizer 在 pretraining sweep 中的应用，并展示它在 COLM 2026 挑战赛中的表现。

该 tokenizer 的源代码已在 GitHub 上公开，欢迎社区成员使用和反馈。我们还将继续优化该 tokenizer，以提高其在各种任务上的性能。

On the Fragility of Self-Improving Agents: Variance, Task Order, and Underspecification

Source: ArXiv cs.AI | Urgency: MEDIUM | 2026-08-18T17:55:07Z

AI agent 自己改善型 AI は、Salesforce AI Research の memory-based AI agent を利用して、agent が自ら学習し、改善する仕組みを実現している。

LLM agents are becoming increasingly important in various applications, from customer service to data analysis. However, the current state of LLM agents is often characterized by underspecification, where the agents' capabilities and limitations are not clearly defined. This can lead to unreliable results and a lack of transparency in the agents' decision-making process.

One of the key challenges in LLM agents is the lack of a clear memory-based self-improving mechanism. While some agents use memory to store information, they often fail to use it effectively to improve their performance over time. This is where the concept of a self-improving agent comes in. A self-improving agent is one that can learn from its own experiences and use that knowledge to improve its future performance.

Salesforce AI Research has been working on developing LLM agents that are more reliable and transparent. They have introduced a new framework for LLM agents that includes a memory-based self-improving mechanism. This framework allows the agents to store information in a text memory and use it to improve their performance over time.

The new framework also includes a self-improving agent that can learn from its own experiences and use that knowledge to improve its future performance. This agent is able to identify its own weaknesses and use that information to improve its performance in the future.

Overall, the new framework from Salesforce AI Research represents a significant step forward in the development of LLM agents. It provides a more reliable and transparent way to build LLM agents, and it introduces a self-improving mechanism that can help agents learn from their own experiences and improve their performance over time.

Offering Zero Data Retention for frontier models

Source: OpenAI | Urgency: MEDIUM | 2026-08-19T00:00:00+00:00

OpenAI is offering Zero Data Retention (ZDR) for its API. This means that OpenAI will not store any data from its API calls, ensuring that user data is kept private and secure. This is a significant step forward in the development of LLM agents, as it allows users to use OpenAI's services without having to worry about their data being stored or used in any way.

OpenAI is also offering Private Safety Processing (PSP) for its API. This means that OpenAI will not store any data from its API calls, ensuring that user data is kept private and secure. This is a significant step forward in the development of LLM agents, as it allows users to use OpenAI's services without having to worry about their data being stored or used in any way.

OpenAI is also offering a new framework for LLM agents that includes a memory-based self-improving mechanism. This framework allows the agents to store information in a text memory and use it to improve their performance over time. This is a significant step forward in the development of LLM agents, as it provides a more reliable and transparent way to build LLM agents.

Overall, OpenAI is making significant strides in the development of LLM agents. It is offering ZDR and PSP for its API, and it is introducing a new framework for LLM agents that includes a memory-based self-improving mechanism. These developments represent a significant step forward in the development of LLM agents, and they are sure to have a major impact on the field.

OpenAI 2023 年 11 月 30 日，OpenAI 宣布其 GPT-4 模型在多个基准测试中超越了人类水平。这一突破性的进展引发了全球对人工智能未来发展的广泛关注和讨论。OpenAI 表示，GPT-4 模型在自然语言处理、图像识别、代码生成等多个领域均表现出色，其性能接近甚至在某些方面超过了人类专家。这一成果不仅标志着人工智能技术取得了重大突破，也为未来的应用开发提供了强大的支持。OpenAI 强调，GPT-4 模型的开发过程中始终遵循严格的伦理和安全标准，确保人工智能技术的安全可控。同时，OpenAI 也呼吁社会各界共同努力，推动人工智能技术的健康发展，造福人类社会。GPT-4 模型的发布，无疑为人工智能领域注入了新的活力，也为未来的技术发展指明了方向。OpenAI 将继续致力于人工智能的研究和创新，为人类社会带来更多的惊喜和突破。

Bedrock-RL: a deterministic Minecraft framework for training and benchmarking VLM agents

Source: HuggingFace | Urgency: LOW | 2026-08-19T00:00:00+00:00

bedrock-rl 是一个用于训练和基准测试 VLM 代理的确定性 Minecraft 框架。该框架旨在为研究人员提供一个稳定、可复现的环境，用于开发和评估视觉语言模型（VLM）在 Minecraft 游戏中的性能。bedrock-rl 支持多种编程语言，包括 Python、Java 和 C++，并提供了丰富的 API 和工具，方便用户进行模型训练和评估。该框架还集成了多种强化学习算法，如 GRPO、RLOO、GSPO 等，以支持不同的训练策略。此外，bedrock-rl 还支持多种奖励函数和评估指标，以便用户根据具体任务进行配置。该框架的发布，为 VLM 代理的研究和开发提供了重要的支持，有助于推动该领域的技术进步。bedrock-rl 的开源发布，将有助于加速 VLM 代理的研究和开发，为学术界和工业界提供一个强大的工具。bedrock-rl 的发布，是 Hugging Face 在强化学习和 VLM 领域的重要贡献，也是其在推动人工智能技术发展方面持续努力的体现。bedrock-rl 的发布，将有助于推动 VLM 代理的研究和开发，为学术界和工业界提供一个强大的工具。bedrock-rl 的发布，是 Hugging Face 在强化学习和 VLM 领域的重要贡献，也是其在推动人工智能技术发展方面持续努力的体现。

Runtime Governance for Agentic AI: Action-Boundary Control with Trusted Provenance and Fail-Closed Execution

Source: ArXiv cs.AI | Urgency: HIGH | 2026-08-19T00:00:00Z

AI runtime governance framework for agentic AI systems. The framework is designed to ensure safe and reliable execution of AI agents by enforcing strict boundaries on their actions and provenance. It is built upon a DAG (Directed Acyclic Graph) structure, which allows for the modeling of complex workflows and dependencies between tasks. The framework is implemented using a runtime engine that monitors and controls the execution of AI agents, ensuring that they operate within predefined boundaries and adhere to strict provenance requirements. The framework is designed to be fail-closed, meaning that it will automatically shut down or restrict the execution of an AI agent if it detects any signs of unsafe behavior or unauthorized access. The framework is also designed to be scalable and flexible, allowing it to be adapted to a wide range of AI applications and environments. The framework is implemented using a combination of hardware and software components, including a runtime engine, a provenance tracking system, and a fail-closed execution mechanism. The framework is designed to be easy to use and integrate with existing AI systems, making it a practical solution for organizations looking to deploy agentic AI systems safely and reliably. The framework is also designed to be extensible, allowing it to be adapted to new AI applications and environments as they emerge. The framework is implemented using a combination of hardware and software components, including a runtime engine, a provenance tracking system, and a fail-closed execution mechanism. The framework is designed to be easy to use and integrate with existing AI systems, making it a practical solution for organizations looking to deploy agentic AI systems safely and reliably. The framework is also designed to be extensible, allowing it to be adapted to new AI applications and environments as they emerge.

Researchers say OpenAI revoked their access to limited cyber program

Source: TechCrunch | Urgency: MEDIUM | 2026-08-19T18:46:14+00:00

OpenAI researchers say they have been revoked access to a limited cyber program. The program, known as Trusted Access for Cyber (TAC), was designed to allow OpenAI researchers to access and analyze data from a variety of sources, including government agencies and private companies. The program was intended to help OpenAI researchers develop and improve their AI models, but it has now been revoked. OpenAI researchers say they were notified of the revocation on August 18, 2026. They say they were not given any explanation for the decision. OpenAI researchers say they are disappointed by the decision, but they understand the need for security. They say they will continue to work on developing and improving their AI models, but they will not be able to access the TAC program. OpenAI researchers say they are not sure when they will be able to access the TAC program again. They say they are not sure if the decision is permanent or if it is just a temporary suspension. OpenAI researchers say they are not sure if they will be able to access the TAC program again.

OpenRouter 6 months ago. The company, which was founded by former OpenAI employees, has raised a \$2.3 billion round led by SpaceX, with participation from xAI, Anthropic, and others. The company's revenue is estimated to be around \$100 million, with a gross margin of 99%. The company's CEO, Sam Altman, is also the CEO of OpenAI. The company's board of directors includes members from SpaceX, xAI, and others. The company's main focus is on providing a platform for developers to build applications using large language models. The company's main competitors are OpenAI, Google, and others. The company's main products are OpenRouter and OpenRouter API. The company's main markets are the United States and Europe. The company's main customers are developers and businesses. The company's main revenue sources are subscription fees and API usage fees. The company's main risks are competition, regulatory changes, and technological changes. The company's main opportunities are growth, innovation, and partnerships. The company's main challenges are scaling, talent acquisition, and market penetration. The company's main goals are to become a leading provider of large language model services and to achieve global dominance in the field.
