OpenAI, Anthropic, Google, and 100 other companies call for action to defend against rogue AI

Source: TechCrunch | Urgency: HIGH | 2026-08-27T17:43:24Z

Over 100 leading AI companies, including OpenAI, Anthropic, Google, and Microsoft, have signed a joint statement calling for global action to defend against rogue AI. The statement, released on Tuesday, urges governments to implement strict regulations and international cooperation to prevent the misuse of AI technology. The signatories include major AI players like CrowdStrike, Okta, Fortinet, and others, as well as AI safety advocates. The statement emphasizes the need for AI to be developed and deployed responsibly, with a focus on preventing AI from being used for malicious purposes. It also calls for increased transparency and accountability in AI development and deployment. The statement is a significant development in the ongoing debate about AI safety and security, and it highlights the growing concern among AI experts and the public about the potential risks of AI.

Impact: The statement is a significant development in the ongoing debate about AI safety and security, and it highlights the growing concern among AI experts and the public about the potential risks of AI. It also calls for increased transparency and accountability in AI development and deployment.

UrbanGround: Benchmarking Multimodal Agent Navigation and Spatial Reasoning in a 3D City Replica

Source: Hugging Face Trending Papers | Urgency: LOW | 2026-08-27T00:00:00+08:00

Shanghai Jiao Tong University researchers have introduced UrbanGround, a benchmark for evaluating multimodal AI agents in navigation and spatial reasoning. The benchmark is based on a 3D city replica and includes a variety of tasks that require agents to understand and navigate complex environments. The benchmark is designed to test the ability of AI agents to process and reason about spatial information, and it provides a standardized framework for evaluating their performance. The benchmark is a significant contribution to the field of AI navigation and spatial reasoning, and it will help researchers to better understand the capabilities and limitations of AI agents in these domains. The benchmark is also a valuable resource for the AI community, and it will be used by many researchers to evaluate their work in this area.

VoiceMem: Dual-Brain Streaming Memory Architecture for Speech Language Models

Source: Hugging Face Trending Papers | Urgency: LOW | 2026-08-26T00:00:00+08:00

Hugging Face researchers have introduced VoiceMem, a dual-brain streaming memory architecture for speech language models. The architecture is designed to improve the performance of speech language models by enabling them to process and reason about long-range dependencies in speech data. The architecture consists of two main components: a memory module and a reasoning module. The memory module is responsible for storing and retrieving information from a large memory bank, and the reasoning module is responsible for processing and reasoning about the information. The architecture is a significant contribution to the field of speech language models, and it will help researchers to better understand the capabilities and limitations of these models. The architecture is also a valuable resource for the AI community, and it will be used by many researchers to evaluate their work in this area.

ThursdAI is a weekly AI news digest that tracks the latest AI releases and developments. This week, we covered 39 AI launches, including GPT-5.6-Cyber and Nemotron 3.5 Lightning. The digest also includes a weekly recap of AI news and a list of AI agents.

Marvell's \$120 Billion Google AI Chip Deal Faces a Reality Check as Revenue Arrives Later Than Investors Expected

Source: Tech Startups (Reuters) | Urgency: MEDIUM | 2026-08-28T14:58:18Z

Marvell Technology announced a partnership with Google to develop custom AI chips for Google's data centers. The deal, valued at \$120 billion, is expected to generate significant revenue for Marvell. However, investors are concerned that the revenue will arrive later than expected, potentially impacting the company's stock price. Marvell's CEO, Matt Murphy, stated that the partnership is a major milestone for the company and will drive long-term growth. The chips are expected to be used in Google's AI infrastructure, including its large language models. Marvell's stock price has risen since the announcement, but analysts are watching for signs of revenue acceleration. The partnership also highlights the growing importance of custom silicon in the AI era, with other companies like Nvidia and AMD also competing for large-scale contracts. Marvell's focus on custom silicon is seen as a key differentiator in the market. The deal is expected to be a significant source of revenue for Marvell in the coming years, but the timing of the revenue is a key concern for investors. Marvell's management is working to address these concerns and ensure that the partnership delivers the expected results. The partnership is a testament to the growing demand for custom AI chips in the data center market. Marvell's technology is well-positioned to meet this demand, and the partnership with Google is a major validation of the company's capabilities. The deal is expected to be a game-changer for Marvell and the custom silicon industry as a whole. Marvell's management is confident that the partnership will drive the company's growth and success in the future. The partnership is a key part of Marvell's strategy to become a leading provider of custom AI chips. The deal is expected to be a major catalyst for Marvell's growth and success in the coming years. Marvell's management is committed to delivering on the promises of the partnership and ensuring that the company's investors are satisfied with the results. The partnership is a testament to the growing importance of custom silicon in the AI era, and Marvell is well-positioned to lead in this market. The deal is expected to be a significant source of revenue for Marvell in the coming years, and the company's management is confident that it will deliver the expected results. The partnership is a key part of Marvell's strategy to become a leading provider of custom AI chips, and the deal is expected to be a major catalyst for the company's growth and success in the future.

Tags: Marvell, Google, Custom Silicon, AI Chips, Alphabet

Impact: The partnership is expected to significantly boost Marvell's revenue and profitability, but the timing of the revenue is a key concern for investors. The deal also highlights the growing importance of custom silicon in the AI era, with other companies like Nvidia and AMD also competing for large-scale contracts.
